

On-Site Store Program

Picture it: A vending machine that dispenses supplies to employees as needed, while also tracking inventory and alerting us to your replenishment needs! It's easy with our smart vending technology.

Keep A Store On-Site

We've helped many of our long-term customers implement an on-site store program at their facilities. In fact, nearly 73% of clients have reported a return on investment (ROI) within the first 8 months of implementing our vending solution systems.

Our inventory control system helps you track and distribute tools at your facility, allowing you to monitor usage rates and costs associated with each of your supply items. Within the first month, customers see an immediate decrease in their usage figures and their supply costs at an industry-proven rate of between 20% and 40%.

Your company can reap the benefit of implementing a vending program without the cost of capital acquisition or the training needed to manage or maintain the equipment. Industrial Supply takes care of it all - the only thing we need from you is Internet connection.

Flexible Vending Solutions

Our vending solutions are available in a variety of configurations that are suited to vend virtually any type of tool or supply. With more than 20 point-of-use options to choose from, we can customize a solution that meets your unique vending needs – from securing your larger equipment and tools, to tracking your mobile assets.

For small- to medium- sized companies, vending solutions are ideal for managing and dispensing consumables, but also have the flexibility to dispense a variety of other products.

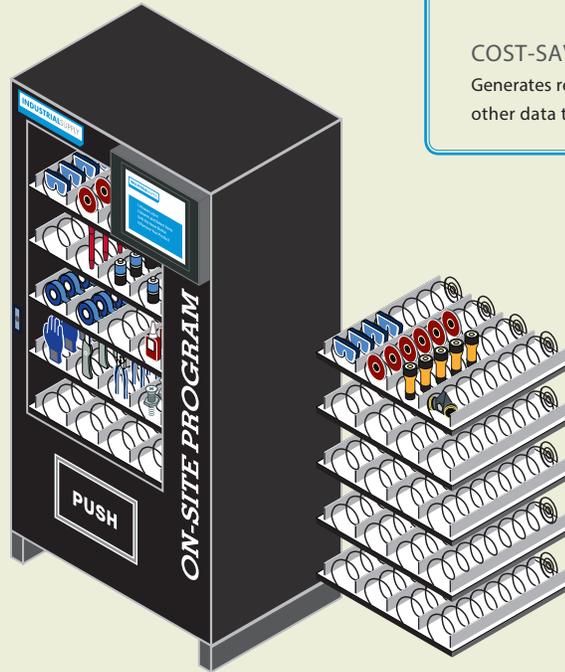

Increasing Accountability Has Never Been Easier

By using RFID (radio frequency identification) for some vended items, we can track inventory throughout your facility to help you locate lost or unreturned items.

COST-SAVING REPORTS
Generates reports on your savings, usage, costs and other data that affect your operations.

INVENTORY CONTROL
Tracks data related to each employee transaction, improving transparency to your company's inventory usage.

Vending machines can communicate directly back to us so we can fill your orders promptly, and provide you with information about your usage.

SAMPLES OF VENDED SUPPLIES
